

Altus
050-ALTUS

Altus, by J.R. Clancy, is perfect for mid-level backstage rigging systems with up to 48 hoists. Its touch screen programmable capabilities allow you to create up to 200 cues with different speeds and targets for each hoist.

This gives you the flexibility you need to stage impressive set changes and dramatic visuals for dramas, musicals, and concerts. During the production, movements are played back reliably, yet can be modified as needed to match the flow of each performance.

Altus Features:

- 12" (305 mm) graphic touch screen for easy operation.
- Record and play back 200 cues, each controlling up to 8 hoists.
- Store 6 shows.
- Each motor moving within a cue can have its own speed and target.
- Direct up/down control plus joystick for adjustment on the fly.
- User-programmed acceleration, deceleration, and default velocity for variable speed sets.
- User-programmed soft end-of-travel limits.
- Load monitoring "learns" a new load, and senses changes (requires hoists equipped with load sensors).
- Industrial-grade components assure reliability.
- Can be table, wall, or pedestal mounted.

Ordering Information

Model	Description
050-ALTUS	Altus with options for wall mount, pedestal, or tabletop use
050-ALTUSP	Pendant

Systems include system commissioning and operator training.

Options:

Model	Description
050-ALTPED	Altus pedestal
050-ALTWM	Altus wall mount bracket
