

**SceneControl 500
050-SC500P**

**SceneControl 500 Wall Model
050-SC500**

**Hand Held Remote
050-SCP**

SceneControl 500 provides top-of-the-line motion control, complete with 3D visualization of your performance space. An accurate display of your theatre on the touch screen lets you easily select the sets you want to control. The user-friendly interface allows you to develop simple or elaborate cues and to modify them to match the flow of each performance.

SceneControl 500 Features:

- An accurate 3D display of your backstage shows the rigging system clearly for easy, instinctive operation. Simple selection of hoists and targets from a graphic display is faster and more accurate than the typical table of numbers.
- Touch screen interface makes controlling hoists and writing cues fast and simple.
- Dual playbacks allow two sets of movements to be controlled independently, so complex moves can be executed simply.
- Joysticks let you speed up or slow down cues to match the requirements of each performance.
- Hoists may be grouped for synchronized operation.
- Load monitoring “learns” a new load, and senses any changes (requires hoists with load sensing option).
- Unlimited number of fixed or variable speed hoists.
- 999 cues or presets.
- USB port.

Safety

- Motion is controlled by “dead man” push buttons, to ensure an operator is at the console.
- Industrial-grade processor and components are used for long-term reliability.
- Three levels of user passwords, key-operated switch, and hardwired E-stop.

Ordering Information

Model	Description
050-SC500	Black cabinet for fixed mounting on a wall or desk
050-SC500P	Pedestal mount, with adjustable height (meets ADA requirements)
050-SCP	Hand held remote with cable & receptacle
050-ESTOP	Emergency stop station
050-SCCR	SceneControl console receptacle

Systems include custom, 3D graphics of your stage area, system commissioning, and operator training.

Options:

- Hand held remote
