

We Test Our Products

J.R. Clancy is committed to providing you with quality products which have been properly designed, evaluated and tested. In fact, our safe, extensive testing program is unmatched in the U.S. stage equipment industry! With this in mind, you can trust that our products are designed and built for the applications in which they will be used.

- ▶ Our **experienced product design professionals** are among the top in their field
- ▶ Products are thoroughly **reviewed by an independent Licensed Professional Engineer**
- ▶ **Finite element analysis and 3D modeling** are used to analyze and verify designs
- ▶ **Rigorous load and cycle testing** is performed in our 60' indoor test tower, simulating theatre conditions
- ▶ **Extensive destructive testing** is also carried out by an independent major international testing firm
- ▶ Engineering analysis and destructive testing data are evaluated to determine **“recommended working loads”**
- ▶ **Installation and application guidelines** are developed to assist you with your rigging projects
- ▶ **Continuous improvements** are always in development to bring you the highest quality products

Equipment and electronic controls are tested in our own 6-story tower before leaving the factory
